

# Quality costs – but pays off!

Longlife, precision shielding of the drum from the airduct due to Viton air flaps.

Cooling coil for condensor like „nobody else“:

- Coil windings are fixed among themselves by straps
- Coil is fixed in condensor housing
- 70  $\mu\text{m}$  tin-coating (compared to the Industry Standard of only 7  $\mu\text{m}$ )

Result: No discoloration of contact water and long lifecycle of coil.

Round shaping as principal applied to most machine parts, offers many advantages:

- Selfcleaning
- No lint buildup
- Better air circulation – shorter cycle time – quietness

The large Cycle Time Remaining display is easily viewed from a distance.

Patented dynamic cage perforation forces the widest airflow in the drum through the garments. Thus, shorter drying time and effective drying of problem areas like shoulder pads etc.

No deposit – Selfcleaning, fully emptying tanks.
